Barcode Evaluator Implementation

The joint customer/Postal Service Technical Advisory Group (TAG) for the Automated Barcode Evaluator (ABE) program has set its implementation plan for the remaining phases of the program.

automation mail below 85 percent. Mail scoring below 70 percent will not qualify for automation rates.

On April 16, the ABE program will go into full effect and the 85 percent criterion will be replaced with a 95 percent threshold.

A 95 percent perfect score will be needed to earn the automation rate for the entire mailing, while a score below 95 percent, but at least 70 percent, will result in loss of the automation discount for that percentage of automation mail below 95 percent. Mail scoring below 70 percent will not qualify for automation rates.

Mail tested by ABE that scored below 70 percent will not qualify for automation rates.

Beginning January 1, 1997, a 45-day period will begin during which all automated barcoded mailings will be tested and the results shared with customers. This phase will allow customers to gain experience with ABE and to take any steps necessary to enhance barcode quality. During this period, any problems diagnosed by ABE will not result in mail being rejected or denied discounts.

Mail tested by ABE that scores below 70 percent will not qualify for automation rates.

On February 15, an 85-70 percent rule will go into effect for 60 days. Mail tested on ABE during this period will have to achieve a quality score of 85 percent or better to be accepted at the full automation rates claimed by the customer. A score below 85 percent, but at least 70 percent, will result in loss of the automation discount for that percentage of

[Please see "ABE Diagnostic Phase Extended" on page 2 for revised dates and additional information—*Editor*]

Automated Postage Statements

The first of 13 different postage statements, Form 3602-R, is now available at the Postal Service's web site (<http://www.usps.gov>) for customers to download to their own computers free of charge. Work is under way on the remaining 12 domestic postage statements, which will become available over the next 6 months.

Although some commercial software already generates facsimile postage statements, the unique aspect of this fill-in-form is that it uses JAVA, a programming language developed by Sun Microsystems specifically for Internet applications. JAVA allows for one-time programming for

usage on various types of computers, accomplished by interpreting software embedded in the operating system of the receiving computer.

The JAVA-based postage statement software provides functionality that goes beyond the easy-follow fill-in format. Additional features include arithmetic functions, data carry-forward from page to page, and automatic advancement to specific areas of the form based on mailpiece weight and/or rate category.

The JAVA-based effort is just one important aspect of the Postal Service's comprehensive Direct Link initiative that capitalizes on the power of the Internet, electronic payment options, and mailing industry data standards like MAIL.dat to build easy-to-use secure communication links and streamlined business processes between the Postal Service and its customers.

continued from page 2

Initiatives under the Direct Link umbrella include electronic transmission of advance mailing information, elimination of hard-copy documentation, electronic clearance information for drop-ship postal facilities, electronic postage payment via standard electronic funds transfer processes, and customer access to mail status and account balance information.

Business Reply Mail

The Postal Service filed a request with the Postal Rate Commission for an experimental service for large volumes of nonletter-size business reply mail (BRM). If approved, the experiment will run for up to 2 years, allowing time for mailers to participate effectively and for the Postal Service to do extensive data collection.

The proposed experiment is designed to produce information on the costs of different methods by which nonletter-size BRM postage and fees are now calculated, on how to achieve the necessary level of quality and revenue protection in those methods, and on the degree of market interest in using these methods. If the experiment proves successful, the results could support an eventual filing to establish a more efficient permanent service that will allow large-volume BRM recipients to benefit from lower overall postage costs and to receive their mail earlier in the day.

The expected customer base for the experimental service includes enterprises that typically receive large volumes of similar nonletter-size items returned by their customers as BRM, such as film processors, medical testing labs, insurance claims processing centers, and mail order medical supply companies.

However, participation in the experimental service will be open to only a small number of mailers (no more than 20) selected so that data can be collected for both methods and a variety of customers.

The fee structure proposed during the experimental period includes a one-time set-up fee, a monthly administration fee, and a fee per piece returned. Different fees apply to each method of postage calculation—weight averaging and reverse manifesting.

The reverse manifest system allows the mailer to document pieces and produce a manifest detailing postage and fees for the service. The Postal Service would oversee the system through an auditing process. With the weight averaging system, the Postal Service weighs each day's incoming BRM and multiplies the weight times a postage-per-pound conversion factor to determine the postage and fees.

ABE Diagnostic Phase Extended

Downloaded from <http://ribbs.usps.gov/file/areal/ABE9702.txt> dated 2/4/97

Based on experience gained during the continuing deployment of the automated barcode evaluator (ABE) system, the Postal Service is revising the timeline for that program. Although there has been significant progress in deploying ABE, the data gathered during extensive live testing has revealed opportunities for program enhancements that the Postal Service believes should be incorporated prior to moving to a "live" environment.

The extended implementation period will allow for incorporation of recent technical improvements in a new software release, more time for on-site system evaluation, and greater opportunities for all customers to have their mail tested and become acclimated to ABE before its use in accepting mail.

The Technical Advisory Group (TAG), a customer panel organized to focus on ABE deployment and implementation, recommended a revised timeline both to allow easing of remaining customer anxieties over the new system and for inclusion of the most recently-developed improvements.

The revised timeline essentially adds an additional 90 days to the current plan. "Live" use of the ABE systems will begin on May 15 using an 85% quality threshold; a 95% threshold will become effective on August 15.

Address Conversions

The following is a list of ZIP Codes within which all or some of the addresses have been changed due to local government action. The Postal Service has agreed to use these new addresses as mailing addresses. Should a mailer wish to obtain the new addresses for customers in the affected ZIP Codes, they may contact the respective delivery unit, the Address Management Systems office serving that area or any LACS licensee. We also recommend you review the information posted on the Rapid Information Bulletin Board System (RIBBS) via our toll free number, (800) 262-9541. This information can be found on RIBBS under the *Address Management Menu*, item 1—text files LACZIP.TXT, LACSZCHG.TXT and LACSMGMT.TXT.

Renumbered Post Office Boxes

This file lists post office boxes that have been renumbered. The old range is the range of PO Box addresses prior to renumbering, and the new range is the range after renumbering. If the numbering change coincided with a ZIP Code change, the newly assigned ZIP Code appears in the New ZIP column. The Continuity column indicates whether the renumbering was accomplished only by changing or adding leading characters. If that was the case, Y appears in the Continuity column.

| OLD ZIP | NEW ZIP | OLD RANGE | | NEW RANGE | | CONTINUITY |
|---------|---------|-----------|---------|-----------|---------|------------|
| | | LOW | HIGH | LOW | HIGH | |
